Assignment Session-3

Subject:SQl

Prepared by : OM VADIYA

Q1) Create a table called Playlist with columns: id (INT, primary key), song_name (VARCHAR), artist (VARCHAR), and duration (INT, seconds). Insert a single row for your current favorite song.

```
create table playlist (
   id INT PRIMARY KEY,
   song_name VARCHAR(50),
   artist VARCHAR(50),
   duration INT
);
INSERT INTO playlist (id,
song_name, artist, duration)
VALUES(1, 'BELIEVER', 'IMAGINE
DRAGONS', 203);
```

Q2) Insert 3 new rows into the Playlist table for songs you recently listened to on Spotify, including their song_name, artist, and duration.

```
insert into playlist (id, song_name,
artist, duration) values (3, 'Die
with a Smile', 'Lady Gaga', 202);
---------------------------------------
insert into playlist (id, song_name,
artist, duration) values (4,
'Fairytale', 'Alexander Rybak', 178);
---------------------------------------
insert into playlist (id, song_name,
artist, duration) values (5, 'Ehsaas',
'Faheem Abdullah', 327);
```

Q3)Update the artist name for one of your Playlist entries to fix a typo (for example, change 'Arjit Singh' to 'Arijit Singh') using the UPDATE statement with a WHERE clause.

```
update playlist set artist = 'Gaga
Lady ' WHERE id = 3;
```

Q4) Delete a song from the Playlist table where the duration is less than 120 seconds using the DELETE statement and a WHERE clause Make sure your WHERE clause is specific so you don't accidentally delete all rows.

```
delete from playlist where
duration < 120;
```

Q5) Write an SQL statement that would update the song_name for all songs by 'AP Dhillon' in your Playlist to add '(Remix)' at the end of the name, but only if the duration is more than 180 seconds.Constraint Combine UPDATE with WHERE to target only the correct rows.

```
UPDATE playlist

SET song_name =
CONCAT(song_name, ' (Remix)')

WHERE artist = 'AP Dhillon'

AND duration > 180;
```
